

Numer	0700913
magazynowy:	
Rodzaj maszyny:	screw press
Producent:	Mez Stroje s.r.o
Typ:	elektrische Rotorpresse
Rok produkcji:	2021
Rodzaj sterowania:	PLC
Kraj pochodzenia:	Czech Republic
Lokalizacja:	Leipzig 1
Czas dostawy:	do uzgodnienia
Opcja dostawy:	EXW, wolne na ciężarówce, bez opakowania
Cena:	na zapytanie

Dane techniczne

Nacisk:	5 t
Odległość między kolumnami:	- mm
Prześwit:	60 mm
Wydajność nominalna:	8 kVA
table height adjustment:	60 mm
Sprężone powietrze:	6 bar
connection voltage:	400 V
elektryka - napięcie / częstotliwość:	400/50 V/Hz
Całkowite zapotrzebowanie mocy:	4 kW
Waga maszyny ok.:	610 kg

Dodatkowe informacje

SERVO-MECHANICAL SPINDLE PRESS

Machine is programmable!

MACHINE DESCRIPTION (2 machines available)

MACHINE: Electrically driven press with a pressing force of 50,000 N

The machine is designed for pressing bearings and rubber seals.

It consists of a welded L-shaped frame.

A movable press table is mounted on the horizontal arm, which can be manually adjusted along linear guides.

In the front position, the table can be manually locked using a spring-loaded pin.

In the working position (under the press head), the table is automatically locked by a pneumatic cylinder.

The press head can only be lowered using two-hand operation when the table is in this position.

The control panel includes:

- Two-hand control switches
- Emergency stop switch
- Table lowering button
- Force selection switches (1, 2)

The pressing force can be adjusted using potentiometers in the control cabinet.

Two force levels and the corresponding pressing speed can be set there.

The press head moves along the vertical arm of the press on linear guides.

It is driven by a lead screw, powered by an electric motor with gearbox via pulleys and a timing belt.

The entire machine is mounted on a table made of aluminum profiles.
